

Declaration environmental management system TTT

Theunissen Technical Trading BV (TTT) wants to contribute to a safer, more functional and sustainable working environment. Since the family business was founded, TTT has been very customer-oriented. We always take the wishes of the customer into account and want to advise them in every process step, both in new construction, conversion and repair. We like to keep it personal: we keep things organized with one person and, if desired, we are happy to enter into personal contact with all our relations.

TTT offers high-quality products and adequate technical support, always aimed at fulfilling agreements. In addition, we attach great importance to the sustainability of our products and systems. These are known for their high quality, long life and relatively limited need for maintenance. Where possible, we recommend the use of more sustainable alternatives, such as LED lighting and high-efficient power supplies. TTT is happy to inform and advise on the environmental impact of various alternative products and systems, so that a targeted choice can be made in view of this important aspect.

TTT's environmental policy is based on the following principles:

- TTT is actively committed to preserving and improving its ecological environment.
 - Maintaining and optimizing its own sites | Reducing waste flows, where possible through reuse
 - Efficient energy use, focusing on reduction and transitioning to renewable energy
 - Actively interacting with its suppliers and supply chain, focusing on opportunities for improving processes and products that benefit the environment
 - Promoting and informing (end) customers about sustainable (more) products and solutions
 - Contributing to sustainable initiatives within the supply chain, such as reducing the footprint for (end) customers or increasing the degree of circularity of used products
- TTT complies with all relevant environmental legislation and actively monitors any changes or expansions, as well as assesses possible actions of measures to reassure (continuation of) compliance
- TTT considers optimal environmental performance a core task and therefore strives for continuous improvement
